

CHAPTER V

CONSLUSION

5.1 Conclusion

Based on the results of the analysis of this research data, it can be concluded although learning is done online during the Covid-19 pandemic students can still be productive and active in attending online learning. It can be seen from the achievement of their score and the responsibility in collecting every assignments and followed the midterm test through online. Based on the results of the interview, the students also think that the explanation and giving of material from the lecturer were very clear and assignments was also routinely carried out every week.

The distributing questionnaires also shown the students learning achievement on the online learning in CLS course during the Covid – 19 period proved that “Output” aspect $r_{XY} = 0,8902$ and “Process” aspect $r_{XY} = 0,909$ it means very strong correlation because the result between 0,800 to 1,000. Then, “Input” aspect $r_{XY} = 0,7138$ it means strong correlation because the result is between 0,600 to 0,800.

Meanwhile, the benefits of this research that the lectures could determine whether should use the online learning class or the regular class. It was proven by the result of this study that show that the online learning class gives a positive result even though there is only a problem that the researcher gets from unstructured interview the student had with, it is the credibility of their devices, connections the internet and the cost of quota.
