

CHAPTER V

CONCLUSION

This chapter provides the conclusions related to the study and the recommendations. The conclusions of the study are drawn based on the result and discussion on the data that gained in the implementation. The recommendations are given to the school, the English teachers and also the future researcher in linier discussion.

5.1 Conclusion

Based on the results obtained after researching, it can be concluded that there is the effects of Youtube video in teaching to improve the students' vocabularies. According to the findings of this research, implementing Youtube video in English teaching leads to better vocabulary mastery of the students. The result proved that students understand the items posttest of vocabularies after 8 meetings of treatments using those approaches. And also there were significant difference after conducting treatments. The use of the technique is able to make the students achievement in vocabulary test higher.

The results of the analyzed data proved that using YouTube videos had indeed more effective for elementary school students' vocabulary mastery. After watching YouTube videos for two months, students of the

experimental group performed better than the control group in the post-test, which indicated their improvement in vocabulary. Moreover, the results of the study showed statistical differences in the mean scores between the two groups in the pre-test and the post-test. The scores of the experimental group had significantly increased from (67,06) in the pre-test to (90,06) in the post-test while the control group scores had slightly insignificant increase from (67,26) in the pre-test to (68,26) in post-test. Therefore, YouTube videos had great potentials in improving the elementary school students' vocabularies.

5.2 Recommendations

Based on the research that has been conducted with a variety of results that have been obtained, the researcher may give suggestions as follows:

1. For teachers:

The use of teaching media should be emphasized more on the visual aspects such as the use of Youtube video to improve students' vocabularies.

2. For school:

The elementary school is expected to provide infrastructure and equipment, such as video as learning media.

3. For other researchers:

They can develop the research further by adding other media that can be support vocabulary mastery.
