

Abstrak

Penelitian ini bertujuan untuk mengetahui hubungan antara karakteristik kepribadian dengan *forgiveness* pada remaja akhir. Hipotesis penelitian yaitu ada korelasi positif antara *extraversion* dengan *forgiveness*, korelasi positif antara *openness to experience* dengan *forgiveness*, korelasi positif antara *agreeableness* dengan *forgiveness* dan korelasi positif antara *conscientiousness* dengan *forgiveness* pada remaja akhir. Subjek dalam penelitian ini adalah remaja akhir dengan rentang usia 17-21 tahun. Subjek penelitian sebanyak 80 remaja akhir terdiri dari siswa-siswi kelas XI dan XII SMK X dan Mahasiswa Universitas Mercu Buana Yogyakarta Semester satu, tiga dan lima yang tergolong remaja akhir. Pengumpulan data dilakukan dengan menggunakan Skala *Transgression-Related Interpersonal Motivation* (TRIM 18) dan skala *Big Five Personality*. Metode analisis data yang digunakan adalah analisis *Product Moment*. Berdasarkan hasil penelitian, diperoleh korelasi antara *extraversion* dengan *forgiveness* pada remaja akhir adalah $r = 0,381$ ($p \leq 0,010$), berarti ada korelasi positif antara *extraversion* dengan *forgiveness* pada remaja akhir. Korelasi antara *neuroticism* dengan *forgiveness* pada remaja akhir adalah $r = -0,236$ ($p \leq 0,050$), berarti ada korelasi negatif antara *neuroticism* dengan *forgiveness* pada remaja akhir. Korelasi antara *agreeableness* dengan *forgiveness* pada remaja akhir adalah $r = 0,205$ ($p \leq 0,050$), berarti ada korelasi positif antara *agreeableness* dengan *forgiveness* pada remaja akhir dan korelasi antara *conscientiousness* dengan *forgiveness* pada remaja akhir adalah $r = 0,372$ ($p \leq 0,010$), berarti ada korelasi positif antara *conscientiousness* dengan *forgiveness* pada remaja akhir.

Kata kunci: *Forgiveness*, karakteristik kepribadian (*extraversion*, *neuroticism*, *agreeableness*, *openness to experience*, *conscientiousness*), remaja akhir

Abstract

This study aims to determine the relationship between personality characteristics with forgiveness in late adolescents. The research hypothesis is that there is a positive correlation between extraversion and forgiveness, a positive correlation between openness to experience and forgiveness, a positive correlation between agreeableness with forgiveness and positive correlation between conscientiousness and forgiveness in late adolescents. The subjects in this study were late adolescents with an age range of 17-21 years. The research subjects as many as 80 final adolescents consisted of students of class XI and XII of X Vocational School and Students of Mercu Buana Yogyakarta University, Semester one, three and five were classified as late adolescents. Data collection is done using Scale Transgression-Related Interpersonal Motivation (TRIM 18) and the scale of the Big Five Personality. The data analysis method used is analysis Product Moment. Based on the results of the study, it was found that the correlation between extraversion and forgiveness in late adolescents was $r = 0.381$ ($p \leq 0.010$), meaning that there was a positive correlation between extraversion and forgiveness in late adolescents. The correlation between neuroticism and forgiveness in late adolescents was $r = -0.236$ ($p \leq 0.050$), meaning there was a negative correlation between neuroticism and forgiveness in late adolescents. The correlation between agreeableness and forgiveness in late adolescents is $r = 0.205$ ($p \leq 0.050$), meaning there is a positive correlation between agreeableness and forgiveness in late adolescents and the correlation between conscientiousness and forgiveness in late adolescents is $r = 0.372$ ($p \leq 0.010$), meaning there positive correlation between conscientiousness and forgiveness in late adolescents.

Keywords: *Forgiveness, personality characteristics (extraversion, neuroticism, agreeableness, openness to experience, conscientiousness), late adolescence*
