Tujuan penelitian ini adalah untuk mengetahui potensi peternakan domba Kecamatan Lendah di Kabupaten Kulon Progo, Provinsi Daerah Istimewa Yogyakarta. Penelitian ini dilaksanakan pada tanggal 3 Agustus – 3 September 2018. Materi yang digunakan adalah peternak domba di Kecamatan Lendah. Jumlah responden 7 peternak dengan total kepemilikan domba sebanyak 95 ekor. Metode yang digunakan dalam penelitian adalah survey dan wawancara terhadap peternak. Variabel yang berkaitan dengan responden berupa identitas peternak, umur, tingkat pendidikan, pengalaman beternak, dan tujuan beternak. Sedangkan variabel berkaitan dengan domba berupa kinerja produksi meliputi bobo badan, *Average Daily Gain*, dan berat induk, sedang kinerja reproduksi meliputi *litter size*, kemudian *Lambing interval*, umur pertama kawin. Hasil penelitian menunjukkan bahwa rata-rata umur peternak 50,71 th, mayoritas tingkat Pendidikan SD sebesar 71,42 %. Untuk rata-rata pengalaman berternak 5,79 th, dengan mayoritas tujuan berternak sebagai sampingan 71,42%. Jumlah rata-rata kepemilikan domba di lendah sebesar 1,28 UT. Rata – rata umur induk domba 3,25 th, rata – rata umur pertama kawin 1,1 th, rata- rata *litter size* 2,3 ekor, rata – rata *lambing interval* 6,7 bulan. Dari hasil penelitian ini dapat disimpulkan bahwa peternakan domba di Kecamatan Lendah memiliki Produktivitas yang baik.
