INTISARI*

Penelitian ini bertujuan untuk mengetahui penampilan reproduksi dari sapi PO dan sapi simpo di Kabupaten Kebumen. Penelitian dilaksanakan pada bulan Februari sampai bulan April 2019. Penelitian ini dilaksanakan di Kecamatan Buluspesantren, Kecamatan Ayah, Kecamatan Karangsambung. Materi penelitian adalah peternak sapi PO dan sapi simpo. Penelitian ini dilaksanakan dengan metode survei dengan wawancara terhadap responden. Variabel yang diamati yaitu karakteristik peternak, umur pertama kawin, *calving interval, service per conception* (S/C) dan lama bunting. Hasil penelitian menunjukkan usia peternak sapi PO 52,24 dan sapi simpo 49,98 tahun; pekerjaan pokok peternak sapi PO didominasi oleh petani yaitu 96% dan peternak sapi simpo didominasi oleh nelayan yaitu 62%; pengalaman beternak peternak sapi PO 25,23 tahun dan peternak sapi simpo 23,11 tahun; pendidikan peternak didominasi pada tingkat SD yaitu sapi PO 64% dan sapi simpo 58%; umur pubertas sapi PO 23,5 bulan sapi simpo 24,06 bulan; *calving interval* sapi PO 15, 28 bulan dan sapi simpo 16,09 bulan; *service per conception* sapi PO 1,88 kali dan sapi simpo 3,02 kali; lama bunting sapi PO 288,73 hari dan sapi simpo 282,94 hari. Berdasarkan hasil penelitian diperoleh kesimpulan bahwa kinerja reproduksi sapi PO lebih baik jika dibandingkan dengan sapi simpo di wilayah Kebumen.

Kata kunci : karakteristik peternak, umur pertama kawin, *calving interval, service per conception* (S/C), lama bunting.
