INTISARI*

Penelitian yang dilakukan adalah “Pengaruh Penambahan Temulawak Dalam Air Minum Terhadap Performan Puyuh Jantan”. Penelitian ini bertujuan untuk mengetahui pengaruh pemberian temulawak lewat air minum terhadap performan puyuh jantan. Ternak uji berupa 120 ekor DOQ jantan kemudian dibagi menjadi 4 kelompok perlakuan (P) yaitu P1: air minum biasa, P2: air minum + 1 gram temulawak, P3: air minum + 2 gram temulawak dan P4: air minum + 3 gram temulawak. Setiap kelompok dilakukan pengulangan sebanyak 3 kali. Ransum yang diberikan setiap kelompok sama yang berasal dari jagung, konsentrat bebek dan bekatul. Ternak dipelihara selama 6 minggu, setelah pemeliharaan selesai dilakukan pengolahan data dengan analisis variansi menggunakan SPSS 2017. Hasil yang didapat dari penelitian yang tertinggi hingga terendah berturut-turut adalah: konsumsi pakan P1 (490.13), P2 (476.19), P3 (473.18), P4 (436.97) gr/ekor/minggu; konsumsi air minum P1 (1466.82), P2 (1423.29), P3 (1407.27), P4 (1386.85) ml/ekor/minggu; bobot badan P1 (144.94), P2 (142.85), P3 (142.57), P4 (137) gram/ekor; FCR P4 (3.58), P1 (3.56), P2 (3.51), P3 (3.50); dan IOFC ; P3 (1345.2), P2 (1342.78), P1 (1329.75), P4 (1221.67) Rupiah. Hasil analisis menunjukkan bahwa penambahan temulawak dalam air minum puyuh jantan berpengaruh nyata ($P<0,05$) terhadap penurunan bobot badan, konsumsi pakan, konsumsi air minum dan tidak berpengaruh nyata ($P>0,05$) terhadap penurunan FCR dan IOFQC . Kesimpulan dari penelitian ini adalah penambahan temulawak dengan dosis 1 sampai 3 gram/ liter air minum tidak dapat meningkatkan performan puyuh jantan.

Kata kunci: temulawak (*Curcuma Xanthorrhiza Roxb.*), puyuh jantan, performan.

THE EFFECT OF TEMULAWAK (*Curcuma xanthorrhiza Roxb.*) ADDING IN DRINKING WATER ON MALE QUAIL PERFORMANCE

**HARDIMAN SISWANTO
NIM: 17022143**

ABSTRACT*

The research carried out was “the effect of temulawak (*curcuma xanthorrhiza roxb*) adding in drinking water on male quail performance”. This study aims to determine the effect of temulawak through drinking water on performance of male quails. Test animals in the form of 120 male DOQ were devided into 4 treatment groups (P), namely P1: ordinary drinking water, P2: drinking water + 1 gram of temulawak, P3: drinking water +2 gram of temulawak and P4: drinking water + 3 gram of temulawak. Each group is repeated three times. The feed given to each group is from corn, duck concentrate and bran. Livestock is maintained for 6 weeks, after maintenance is done processing data with analysis of this variance using SPSS 2017. The result obtained from the study in a row are: feed consumtion P1 (490.13), P2 (476.19), P3 (473.18), P4 (436.97) gr/tail/week; drinking water consumtion P1 (1466.82), P2 (1423.29), P3 (1407.27), P4 (1386.85) ml/tail/week; body weight P1 (144.94), P2 (142.85), P3 (142.57), P4 (137) gram/tail; fcr P4 (3.58), P1 (3.56), P2 (3.51), P3 (3.50) and IOFQC P3 (1345.2), P2 (1342.78), P1 (1329.75), P4 (1221.67) Rupiah. The analysis result from this research indicate that the addition of temulawak in male quail drinking water has a significant effect ($P<0,05$) on decreasing body weight, feed consumtion, drinking water consumtion and no significant effect ($P>0,05$) on decreasing FCR and IOFQC. The conclutions of this research indicate that the addition of temulawak with a dose of 1 to 3 grams/liter of drinking water can not improve male quail performance.

Key words: temulawak (*Curcuma Xanthorrhiza Roxb.*), male quail, performance.
