

ABSTRAK

Di Indonesia, angak kematian ibu hamil masih sangat tinggi, kurangnya pengetahuan mengenai gejala yang dirasakan saat masa kehamilan membuat ibu hamil tidak menghiraukan gejala-gejala tertentu yang dapat mengidikasi penyakit berbahaya dan menadi penyebab tidak langsung kematian ibu hamil. Selain itu, resiko kematian ibu juga semakin tinggi akibat adanya faktor keterlambatan mengambil keputusan untuk dirujuk. Berdasarkan hal tersebut, diusulkan solusi berupa sistem pakar diagnosa penyakit ibu hamil menggunakan metode *Certainty Factor* (CF) yang dapat membantu mengenali penyakit selama kehamilan berlangsung berdasarkan gejala-gejala yang dirasakan ibu hamil. Metode CF memiliki kinerja sistem yang mampu menggambarkan tingkat keyakinan seorang pakar terhadap masalah yang di alami. Berdasarkan hasil pengujian, diperoleh hasil 100% fungsionalitas sistem pakar diagnosa penyakit ibu hamil berjalan sesuai dengan daftar kebutuhan sistem dan sistem mempunyai tingkat akurasi sebesar 100%.
