Stock returns are the results obtained from investments. Financial ratios become one of the fundamentals to determine the level of change in stock returns. This study aims to examine the effect of liquidity, profitability, and solvency on stock returns. The data of this study consists of financial statements of companies manufacturing the basic and chemical industry sectors. The method of the study used is multiple regression analysis. The results of testing this hypothesis indicate that liquidity is measured by Current Ratio (CR) and profitability is measured by Return On Assets (ROA) effect on stock returns while profitability is measured by Return On Equity (ROE) and solvency is measured by Debt to Equity Return (DER) not effect on stock returns.

Keywords: liquidity, profitability, solvency, Current Ratio (CR), Return on Asset (ROA), Return on Equity (ROE), Debt to Equity Return (DER), and stock return
