THE EFFECT OF CURRENT RATIO, DEBT TO EQUITY RATIO, AND RETURN ON EQUITY, ON STOCK PRICES ON FOOD AND BEVERAGES COMPANIES LISTED ON THE INDONESIA STOCK EXCHANGE 2016 – 2019

ABSTRACT

This study aims to examine the effect of the current ratio, debt to equity ratio, and return on equity, on stock prices in food and beverages companies in the consumer goods sector listed on the Indonesia Stock Exchange for the 2016-2019 period. The type of data used in this study is secondary data obtained from a summary of the company's performance listed on the website www.idx.co.id. The sampling technique used in this research is purposive sampling. The number of companies used as many as 32 companies. Analysis of the data used in this study is multiple linear regression analysis. The results showed that the current ratio had a significant positive effect on stock prices, the debt to equity ratio had a significant negative effect on stock prices, and return on equity had a significant positive effect on stock prices. The independent variable that has the most dominant influence on stock prices is the current ratio.

Keywords: *current ratio, debt to equity ratio, return on equity and stock pric*
