

CHAPTER V

CONCLUSION AND RECOMMENDATION

This chapter presents the conclusions and suggestions. The conclusions are the answers to the formulated problem in chapter one and the suggestion contains the writer's suggestions for students, readers and other researchers related to this study.

5.1 Conclusions

The development of E-Learning as a media of learning by applying principles of Epignosis LLC. in Leonardo Vocational High School have 9 steps of research development based on the model proposed by Borg and Gall (1989) and declared to be "ELIGIBLE" as well as is in compliance with the principles expressed by Epignosis LLC. (2014).

Judging from some of the results of the study i.e. the result of the validation, validation media expert content, initial field trials, field trials and test the implementation field. As for the validation phase I obtained a score of 53 with a 3.5 average and categorized "good", on the media validation phase II obtained a score of 61 with average 4 and categorized "good". On the validation of material phase I gained 45 with average score of 3.2 and categorized "good", on the validation of material phase II obtained a score of 50 average 3.6 and categorized with "good". The initial field test was carried out with the subject as much as 3 people learners by acquiring a score of 51.7 average 4.3 and categorized with "very good". Furthermore carried out field trials with the subject 8 learners gain score average 4.5 with 54.5 and categorized "very good". As for the field test was carried out by the subject of the entire X-grade learners of Electronics Industry with a total of 29 get score 51.2 average 4.3 and categorized with "very good".

In addition, the above data is supported with enthusiasm the learners in accessing E-Learning developed. Similar with it, on a column suggestion questionnaire assessment there are comments that the overall positive learners greatly helped by the existence of learning E-Learning.

5.2 Recommendation

Recommendation of this research would be used by people who concern in English teaching such as school, learners, and the another research.

It was recomment to the school, especially for English teacher to utilize E-Learning so the learning will be more varied and learners can follow the development of the technology.

This E-Learning also recommended for learners to optimize the use of online-based learning, which can be accessed without any limitations of time and space.

For the next researchers who will developing E-Learning that is recommended to follow the development of the technology.
