Penelitian ini bertujuan untuk mengetahui hubungan antara persepsi terhadap *job demands* dengan *workplace well-being*. Teknik *sampling* dalam penelitian ini menggunakan *purposive sampling*. Subjek berjumlah 51 karyawan dan karyawati perusahaan X yang menerima upah di bawah Upah Minimum Propinsi (UMP) berusia antara 18-40 tahun. Peneliti berasumsi bahwa terdapat hubungan positif antara persepsi terhadap *job demands* dengan *workplace well-being*. Data dikumpulkan dengan menggunakan skala yang dibuat oleh peneliti yaitu Skala *Workplace Well-being* dan Skala Persepsi terhadap *Job Demands*. Analisis data pada penelitian ini menggunakan *non-parametrik Spearman's Rho* untuk menguji hipotesis, karena distribusi data dalam penelitian ini tidak normal. Hasil penelitian ini menunjukkan hubungan positif yang sangat signifikan antara persepsi terhadap *job demands* dengan *workplace well-being* ($r = 0,925$) dengan signifikansi 0,000 ($p < 0,01$). Artinya persepsi *job demands* pada karyawan yang menerima upah di bawah UMP memiliki pengaruh sebesar 85,6% terhadap tingkat *workplace well-being* dan sisanya sebesar 14,4% dipengaruhi oleh faktor-faktor lain yang tidak diteliti.

Kata kunci : persepsi terhadap *job demands*, *workplace well-being*, karyawan

**THE RELATIONSHIP BETWEEN PERSEPTION TO JOB DEMANDS
WITH WORKPLACE WELL-BEING WHO RECEIVES SALARY BELOW
THE PROVINCIAL MINIMUM SALARY**
